with power supply	
Electronic transmit-receive switch (Johnson)	
Subscriptions to the three leading radio	
magazines (QST, CQ, and 73)	
Dues \$2.00 per semester.	total \$ 725.84

Since the Case Amateur Radio Club, under the call W8EDU, has been organized we have been trying to acquire the necessary equipment piece by piece on a yearly basis. Last year the Senate granted the Club money to purchase a good receiver. This year A low power 6 and 2 meter transmitter was purchased to enable the novice and technician class licencees to operate. As a final step in our program, we need a good low frequency high power transmitter, such as the Hallcrafters HT 44, to allow the general and amateur extra class licencees to operate. Whereas the 6 meter transmitter provides local communications, the HT 44 would give us world wide coverage. This type of total coverage has great usefulness both in times of emergency such as floods, earthquakes, and national disaster, and message transmission for all Case students. It certainly would spread good will for Case Tech.
